In recent years, the profession of veterinary medicine has become ever more sophisticated and complex. The public expects state-of-the-art veterinary care for its animals. To provide high quality service, today's veterinarians utilize the skills of trained professionals known as *veterinary technicians*.

If you care about animals, enjoy working with your hands, are good at basic math and decision-making, like working with people and handling a variety of responsibilities, then the challenging career of veterinary technology may be just right for you.

Duties and Responsibilities

The veterinary technician is an integral member of the veterinary health care team who has been educated in the care and handling of animals, the basic principles of normal and abnormal life processes, and in routine laboratory and clinical procedures. All veterinary technicians work under the supervision of a licensed veterinarian. While a veterinary technician can assist in performing a wide variety of tasks, they cannot diagnose, prescribe, perform surgery, or engage in any activity prohibited by a state's practice act.

In Private Practice

A veterinary technician employed in a veterinary clinic or hospital handles many of the same responsibilities that nurses and other professionals perform for physicians. They are trained to:

- Obtain and record patient case histories
- Collect specimens and perform laboratory procedures
- Provide specialized nursing care
- Prepare animals, instruments, and equipment for surgery
- Assist in diagnostic, medical, and surgical procedures
- Expose and develop radiographs
- Advise and educate animal owners
- Supervise and train practice personnel
- Perform dental prophylaxes

In Biomedical Research

In addition to the responsibilities above, veterinary technicians employed in a biomedical research facility perform other duties under the supervision of a licensed veterinarian, a biomedical research worker, or other scientist:

- Supervise the humane care and handling of research animals
 - Assist in the implementation of research projects
-

Career Opportunities

While the majority of veterinary technicians are employed in private practice, the demand for technicians is rapidly expanding to include new employment opportunities in *both* human and animal health-related fields such as:

Biomedical research	Diagnostic laboratories
Colleges/Universities	Veterinary supply sales
Zoos and wildlife facilities	Humane societies and animal control facilities
Military service	Drug and feed manufacturing companies
Food safety inspection	

Education

The American Veterinary Medical Association (AVMA) accredits veterinary technician programs throughout the U.S. that are conducted in laboratory or clinical settings involving the humane use of live animals. Most AVMA-accredited programs lead to an associate's degree after two years but some lead to a four-year baccalaureate degree. Students earning a baccalaureate degree usually receive higher salaries and greater level of job responsibilities.

A period of **clinical experience** in a veterinary practice is required for all students in an AVMA-accredited veterinary technology program. This period of hands-on training is called a *preceptorship*, *practicum*, or *externship*, and is a critical component of the veterinary technician program.

Distance Learning

To accommodate work and family obligations, distance learning is an option for many students wishing to earn a veterinary technician degree from home. The AVMA accredits several distance-learning courses that meet the same Standards of Accreditation as traditional programs and includes a clinical component. Students fulfill the clinical training through sponsorship by a licensed veterinarian.

Salary

Veterinary technicians earn salaries that compare favorably to those in other fields requiring a similar education. Salaries vary according to experience, responsibility, geographic location, and employment type.

Professional Regulation

The majority of states have regulations that provide for technician credentialing (certification, licensure, or registration). Candidates are typically tested for competency through an examination regulated by the State Board of Veterinary Medical Examiners (or other appropriate agency). Some states require candidates to pass the Veterinary Technician National Examination before being issued a license to practice.

Veterinary Technician Specialties

Some veterinary technicians decide to focus on areas of specialization. There are currently three specialty academies and one society. A "Society" is defined as a group of individuals, veterinary technicians, hospital staff, and veterinarians interested in a specific discipline or area of veterinary medicine. An "Academy" is the term selected by the NAVTA to designate a group receiving recognition as a specialty. Current specialty groups are:

Academy of Veterinary Emergency Critical Care Technicians (AVECCT) – www.avecct.org

Academy of Veterinary Technician Anesthetists (AVTA) – www.avta-vts.org

Academy of Veterinary Dental Technicians (AVDT) – www.avdt.us

Society of Veterinary Behavior Technicians – www.svbt.org

Veterinary Technician Associations

About 100 state, local, and provincial organizations of veterinary technicians exist across the United States and Canada. The National Association of Veterinary Technicians in America (NAVTA) offers its members continuing education, social, and employment-related activities to assist in their professional growth. For specifics on Canadian veterinary technology programs, contact the CAAHTT at the address below.
