Blood pressure monitoring is so very important in the evaluation of human health for routine check ups, cardiovascular conditions or during surgical procedures. Well, it is no less important for your pets.

As a means of achieving our goal of providing the best possible health care for your pets, we have a Doppler blood pressure monitor, so we can easily and accurately measure the blood pressure of your dog or cat. It can enable us to analyze cardiovascular or disease conditions which could lead to hypertension (high blood pressure) or hypotension (low blood pressure). This enables us to properly diagnose the condition and aid in the treatment protocol.

In addition, we have great pride in our surgical monitoring and the Doppler monitor is a great tool in that regard. We have a certified veterinary technician who is assisting our surgeon during the entire surgical procedure and continually monitors the pet during the procedure. They carefully monitor the blood pressure with our Doppler blood pressure monitor so we can be sure that your pet remains in excellent condition during the procedure.
